

THE 5 PLACES YOUR BUSINESS IS QUIETLY **BLEEDING** MONEY

THE MONEY-LEAK CHECKLIST

A 5-minute checklist for busy owners. Find
the 5 leaks — then steal the AI
automation that plugs each one.

THE DIAGNOSTIC

5 Areas Where Businesses Lose Money

Answer honestly. If you're nodding along to more than two of these, you have a real problem — and a real opportunity.

AREA 01

Manual Data Movement

"Does anyone on your team copy information from one place and paste it into another — more than once a week?"

LOOK FOR

- Pulling data from forms into your CRM manually
- Retyping invoice info into spreadsheets
- Exporting reports and reformatting them in Excel
- Moving leads from one tool to another by hand

Estimated Bleed: 3–7 hrs/week per person — up to \$700/month in wages for work a \$20 tool could handle.

- ☐ Someone on my team moves data manually on a regular basis.

AREA 02

Lead Follow-Up Gaps

"If someone fills out your contact form at 9pm on a Friday, what actually happens?"

LOOK FOR

- No auto-response beyond a generic "we'll be in touch"
- Follow-up dependent on one person checking their email

AREA 03

Repetitive Customer Support Questions

"Pull up your last 50 support emails or DMs. How many of them ask the same 8-10 questions?"

LOOK FOR

- "What's included in your service?" — answered daily
- "How long does it take?" — answered daily
- "Can I get a refund?" — answered daily
- Pricing questions you field individually every single time

Estimated Bleed: 1 hour/day on repeat questions = \$6,000-\$12,000/year answering what you've already answered.

- ☐ More than 30% of our support volume is the same questions repeating.

AREA 04

Content Production Bottlenecks

"How long does it take from 'we should post about this' to something actually going live?"

LOOK FOR

- Blog posts that take 4+ hours to write from scratch
- Social posts requiring 3 rounds of approval
- Video content that never gets repurposed into anything else
- Newsletters skipped because "nobody has time this week"

Estimated Bleed: Inconsistent content means inconsistent leads — the real cost is the growth you forfeit by not showing up.

AREA 05

Unused or Unread Data

"When did someone on your team last make a business decision based on data — not gut instinct?"

LOOK FOR

- Google Analytics nobody logs into
- A CRM with pipeline data that never gets reviewed
- Email open/click rates you track but don't act on
- Customer feedback sitting in a spreadsheet from 6 months ago

Estimated Bleed: Every call made on gut while the data sits unread costs you — wrong hires, wrong offers, wrong channels.

- ☐ We have dashboards or reports that nobody looks at consistently.

TALLY IT UP

Count your checked boxes. Zero or one, you're tight. Two or three, you're leaking — and it compounds every month. Four or five? The good news: every one of these has a fix, and they're on the next page.

THE FIX

5 Automation Ideas Worth Stealing

These aren't theoretical. Each one maps directly to a bleed area above — and each can be built in a weekend or less.

01 Instant Lead Response Bot

The moment someone submits a form, an AI-drafted, personalized email goes out — references what they asked about, sets expectations, and optionally books a call. No human required.

TOOLS Make.com + Claude/ChatGPT + your CRM SETUP ~3 hours FIXES Area 02

02 FAQ Chatbot Trained on Your Content

Feed it your website, your service docs, your top 50 support emails. Deploy it on your site. It handles Tier 1 support 24/7 — without a human ever getting pulled in.

TOOLS Voiceflow, Botpress, or Claude-powered widget SETUP A weekend FIXES Area 03

03 Content Repurposing Pipeline

Record a video or write one post → automation strips the transcript → AI turns it into 3 social posts, 1 email, and 5 short clips. One piece of content does 10x the work.

TOOLS Make.com + Claude/ChatGPT + your scheduler SETUP ~4 hours FIXES Area 04

04 Auto-Generated Weekly Business Recap

Every Monday at 7am: revenue last week, leads in pipeline, top support issues, content performance — summarized in plain English, delivered to your inbox. No analyst required.

TOOLS Make.com + your existing data sources SETUP ~4 hours FIXES Area 05

05 Onboarding Sequences (Client or Employee)

New client signs? Trigger a 7-day automated sequence: welcome email, what to expect, how to reach you, milestone check-ins. New hire starts? Same idea. Zero manual coordination.

TOOLS ActiveCampaign, ConvertKit, or any email automation SETUP ~3 hours FIXES Area 01

NEXT STEP

Ready to Stop the **Bleed**?

That's literally what we do.

NEED SOMETHING BUILT?

Erase Friction builds the AI automations and custom workflows above — so your team stops doing things by hand. Tell us where you're bleeding, and we'll build the fix.
